

REBLOC®

REBLOC 60H_12

REBLOC® Temporary systems ensure smooth traffic flow in congested areas. Traffic is separated from construction zones and protects personnel and site machinery from vehicle impact and traffic related incidents.

The compact design is most effective where space is restricted and timeliness tight. The 12 m element length is optimal for deployment and use of available space in construction sites.

The REBLOC® coupling system guarantees a safe and quick installation, which is possible at any time of the year and in any weather.

The large contact areas with integrated rubber pads result in a low surface pressure and protect the road surface.

Standard Element

Temporary System

Features and Benefits

- Compact element design (system width 260 mm) with integrated coupling (no loose parts)
- High installation speed: easy and quick installation, relocation and removal
- Reflectors on both sides for guidance, increasing safety & awareness of road users
- Part of the UK's largest Vehicle Restraint System rental pool

REBLOC 60H_12

Standard Element

Specifications

all dimension in mm

Containment level	N2	Tested in accordance to EN 1317-1/2, TB32, TB11
Working Width	W4	
Impact severity level	ASI B	
Installation	free standing on asphalt/concrete	
Terminal element	required; rebloc 60_3t (4 X VRS-AN-1004)	
Dimensions L x W x H	12000 x 260 x 600 mm	
Weight/element	2180 kg	
Elements/truck (24t)	11 elements	
Minimum installation length	120 m (not including terminal element)	
Curve radius	$r \geq 200$ m	
Concrete quality	C35/45, exposure class according to national requirements	
Coupling/exposed steel parts	fully integrated, exposed parts hot-dip galvanized	
CE certification	✓	

System Element - Combinable

Terminal Element
REBLOC 60_3T
(inclination 1:5)

Dialation element
Length composition:
410-870 mm
